**Notes:**

Arrived on location at 10:35. 10 degrees F, cloudy, NW wind 0-5 mph. Walked the area and took photos. It appeared that the release originated from the flare stack on the SW corner of the well pad and sprayed oil toward the SE, with a majority of the impact remaining on the well pad. It appeared that an area (approximately 200 square feet) off the well pad and outside of the fencing had some residual petroleum staining on the current snow cover.

More followup needed.
